

## Process

Workload

Shares host kernel

*Host kernel only*

Fastest, weakest

## Container

Workload

Shares host kernel

*Namespaces  
+ cgroups*

Practical, still  
shares kernel

## Virtual machine

Workload

Guest kernel

*Hardware virtualisation*

Strong bound-  
ary, slower boot

## MicroVM

Workload

Minimal guest kernel

*Minimal device model*

Strong + fast boot

Host hardware
